

GENERATOR FROM MOTOR

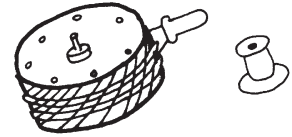

A simple generator can be made from a Cassette Player / DVD Player motor.

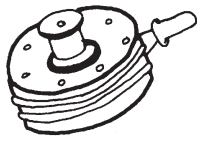

1. Salvage an old Cassette Player or DVD Player old motor. These motors usually run on 9-volt DC.

2. Solder a LED to the two leads of the motor.

3. Tightly fit a small pulley to the axle of the motor. The pulley will enable you to grip the axle and twirl it with your hand.

4. This is the final assembly.

5. Now grip the pulley and give it a sharp twirl. The LED will glow! This makes for a very simple electric generator.
